

Workshop

Monday 20th October 2014
10.30-16.30

Aula Magna - Centro Servizi
Azienda Ospedaliero-Universitaria Policlinico di Modena
Via del Pozzo 71, Modena, Italy

How do researchers decide on what research to carry out? Definition, concepts and use of systematic reviews for Research Priority Setting

Dr Mona Nasser

Co-Convenor, Cochrane Agenda and Priority Setting Methods Group
Peninsula Dental School, University of Plymouth (UK)

Some researchers make decisions on which research to carry out on the basis of their personal interests, curiosity about the topic, whilst others might be attracted by job opportunities, and some just follow what their bosses tell them to do it. Recently, more and more scientists are recognising the importance of identifying and understanding the needs of policy-makers, clinicians and patients on what questions can enhance public health or patient care. The workshop will explore these issues and in particular it will focus on the methods used for research priority setting.

The workshop will be conducted in English and is open to the public.
For further information please contact Roberto D'Amico roberto.damico@unimore.it
To attend the workshop it is necessary to register : XXXXXXXX.
Partecipazione in the workshop is free of charge.

The workshop is organised under the II edition of the post-graduate course in Cochrane Systematic Reviews and Meta-Analyses, held at the University of Modena in collaboration with the Italian Cochrane Centre.
